PROFESSIONAL SUMMARY

Third-year Information Systems student at ITB with hands-on experience building and deploying production-facing full-stack systems serving **2,000+ active users**, **25,000+ monthly page views**. Delivered secure backend architectures on **PostgreSQL/Supabase**, integrated **Xendit** payment workflows, and completed contract work for clients including an international university research team.

EXPERIENCE

ITBFess itbfess.wtf	Sep 2024 – Present
<i>Founder & Full-Stack Developer</i>	<i>Bandung, West Java</i>
- Founded and solo-developed an end-to-end campus community platform, driving adoption to 2,000+ active users and serving 25,000+ monthly page views. - Designed a secure PostgreSQL + Supabase backend with RLS and migration-driven schema changes for moderation and monetization workflows. - Integrated Xendit payments with signed webhook verification, idempotent state transitions, and automated retries for paid features. - Wrote Vitest-based integration tests for scheduled workflows and payment processing logic to reduce production regressions.	
Medical Docs West Java Chapter (Meddocs WJC) meddocswjc.com	Jun 2025 – Aug 2025
<i>Contract Full-Stack Developer</i>	<i>Remote</i>
- Engineered a membership portal handling profile management and event access control for a West Java doctors motorcycling community. - Integrated Twilio OTP verification to enforce secure authentication and provide a friction-free onboarding experience for premium registrations.	
Containder Indonesia	Apr 2025 – Aug 2025
<i>AI Engineer (Intern)</i>	<i>Remote</i>
- Developed Python/FastAPI computer-vision services with OpenCV and YOLO pipelines for real-time edge-device classification workflows. - Improved end-to-end inference latency from 800ms to 120ms on low-power edge devices by optimizing the detection pipeline. - Maintained stable device-to-cloud communication for real-time operation under constrained device/network conditions.	
Si-Zero Research Platform sizero.org	Dec 2024 – Jan 2025
<i>Contract Full-Stack Developer</i>	<i>Remote</i>
- Developed a full-stack research management platform for a Swinburne University of Technology team utilizing Next.js, Drizzle ORM, and PostgreSQL for type-safe data architecture. - Architected the foundational database schema and Supabase backend services to support structured, scalable research content management.	

PROJECTS

AquaMine AI – Environmental Monitoring Python, MQTT, TimescaleDB, TimeGPT, YOLOv8 Demo	Jan 2026 – Feb 2026
2nd Runner Up ISMC XV Hackathon – Built an acid mine drainage early-warning system that reduced contamination confirmation from a 48-hour lab cycle to real-time detection; ingested multi-sensor telemetry via MQTT into TimescaleDB, forecasted anomalies with TimeGPT, and verified incidents via drone-based YOLOv8 imagery.	
Setorin – AI Recycling Platform Next.js, FastAPI, MongoDB, WebSocket, Docker Demo	Jul 2025 – Aug 2025
1st Runner Up COMPFEST 17 AI Innovation Challenge – Built a multi-service AI recycling platform (Next.js, FastAPI, MongoDB) with WebSocket real-time detection and automated reward processing, shipped via Docker Compose.	
8EH Radio ITB Next.js, Node.js, Prisma, Cloudflare R2 8ehradioitb.com	Apr 2025 – Present
Led migration from legacy WordPress to headless Next.js architecture (5x faster page-load performance) and built a streaming proxy to stabilize Shoutcast playback across modern browsers.	

EDUCATION

Institut Teknologi Bandung (ITB)	Bandung, Indonesia
<i>Bachelor of Engineering in Information and System Technology</i>	<i>2023 – 2027</i>
Awards: 2nd Runner Up ISMC XV Hackathon, 1st Runner Up COMPFEST 17 AI Innovation Challenge, Ganesha Karya Awardee 2025.	

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL (PostgreSQL)
Backend/Infra: Node.js, Express, FastAPI, Supabase, Redis, Docker, GitHub Actions, Drizzle, Prisma
Cloud/DevOps & Testing: AWS, DigitalOcean, Vercel, Coolify, CI/CD Pipelines, Vitest
Frontend/Realtime: Next.js, React, Tailwind CSS, WebSocket, MQTT
